
KeyMACRO is a powerful, yet easy to use and flexible keyboard macro utility. It supports editing a wide range of editable data fields in Windows applications, including TEXT, NUMBERS, AIML, etc. and users can record keystrokes in macros to automate repetitive tasks, making them easy and quick. KEYMACRO is the best keyboard macro software ever. With KeyMACRO, you can automatically record any series of keystrokes and paste them as a single continuous command into other applications, even while they are running in the background. You can easily select a macro recorder or a keyboard mapping mode and drag and drop text fields, numbers and AIML fields into the recording section. You can also use key modifiers to change the default setting of different recording or mapping modes. KeyMACRO has a user-friendly interface and can be run without requiring administrative privileges, allowing users to perform macros without any restrictions. It's a full-featured, all-purpose text editor with support for macro recording, key mapping, AutoHotkey style scripting, text and script highlighting, and tag support. You can use KeyMACRO to perform text editing, browse files, type messages, edit or create word documents, compose rich text documents, and perform other tasks. The program supports Windows 98/ME/NT/2000/XP/Vista/7/8 and includes the AutoHotkey scripting language for creating your own custom functions.

FEATURES- Supports recording macros in TEXT, NUMBERS, AIML and many other editable fields- Automatically update of recording fields whenever the text changes- Supports selection and use of key modifiers to change the default mapping settings- Supports AIML macros for interactive communication with the internet- Supports hotkeys- Ability to choose between "Windows Keyboard" or "AutoHotkey Keyboard" mapping mode- Allows recording of mouse clicks, menus, and other GUI actions- Full Unicode support, including DBCS support- Support for Unicode, Japanese, Arabic, Chinese, Korean and other languages

Instant Geolocation Finder Screenshot Overview Instant Geolocation Finder Instant Geolocation Finder enables you to find the Geolocation (Latitude & Longitude) of the currently displayed map of the Maps application using a mouse click. Screenshot Details Map Applications: The map you are using needs to be in the Maps application, for it to be able to be used with this tool. Latitude & Longitude: Latitude and Longitude values can be entered manually or using default coordinates, which are: 39° 42' 45.80" N and 76° 12' 29.98" W. Direction: The direction, a.k.a. bearings, is a value that represents the direction of the mouse cursor. This value can be used to determine the direction the map will be set. It is automatically set for you, and the degrees is the only required value for it to be defined. Map: The map that will be used to find the Geolocation needs to be selected. You can either use the Selection Tool (Pencil, or just Enter) to select a specific map, or you can use the Maps context menu to select a particular map. Once you have the map selected, you can then zoom in and out, by using the up and down arrows on your mouse. You can also pan, to change the view of the map. To remove the map from the scene, simply press the Escape key on your keyboard. Testimonials "We needed an application that would allow us to send out holiday cards, envelopes and thank you notes to customers. As we usually just use the corporate envelopes and stamp from the Post Office, we needed an application that would allow us to print our own address. We have received very positive feedback and have gained the confidence that we can use the application for even more." Michael "We

use this software to give users at our organizations personalized web pages. We use it to display group photos and personal information such as education and work history, and we use it to create custom email addresses. We were looking for a way to prevent our users from accessing non-approved web pages. As we have access
