- 1000's of keyboard macros to help you type faster and with fewer errors - Supports Auto-Command. What this feature does is, every time you hit the capslock key, it will perform a specific action (eg: start the macro). - Auto-Hotkey. This feature lets you define hotkeys to automate common tasks, just like the 'Winkey+I' hotkey is used to launch the calculator. - Full Unicode support - No installation. Once the software is downloaded and installed, you can begin typing macros immediately! - Runs on any Windows OS, from Windows 2000 to Windows 7 - Supports Win API hotkeys. Win API stands for Windows Application Programming Interface. So basically, Win API hotkeys is like macros. - Starts automatically after every keystroke. It doesn't stop working until you close the software. - Unlimited recording. Record as many keys as you want. All you need to do is stop when you are done. - Support multiple keyboard layouts. Just click on the 'Configuration' button. - Easy to use interface. Just select the area you want to record and hit the 'Start' button. - Compatible with all windows applications, including MS Office. - Powerful text editor. Once you are done recording, you can edit all the macros in the text editor. - Save all macros to text files. You can also send them to others via e-mail. - Supports many languages. - Supports all character codes. - Supports single keypad. So if you have a keyboard without a mouse, you can still use the software. - Supports WIN-A keys. WIN-A key is the WIN key on the keyboard. All your Win-A key macros will be recorded. You just need to press WIN and the macro will be done. - Auto-save feature. If you forget to save, the software will automatically save it. - Supports profiles. You can record macros for each user. - Supports 'all key' hotkey macros. You can set a hotkey to record all key macros. - Supports key-repeats. You can record how many times you hit a key. - Autosaves on exit feature. Once you are done, press the 'Close' button and it will save automatically. - Advanced graphic option. - Advanced configuration option. - Unicode support. You can choose to use UTF-8 encoding. It is very useful for Asian languages. <http://www.blumenmuedergarten.de/index.php?pos=0§ion=guestbook>
