The program allows artists to convert the color of their final output image into any of the ~255,000+ colors of the Crayola brand. This is a huge undertaking, but one that can be accomplished very easily by downloading and installing the software. The Crayola Color Studio color management tool for Photoshop, once installed, is available in the Application menu on a Mac. The Swatch color picker Once the program is opened, the application will ask you to connect to the Crayola brand's website. Once you log in, you can begin the process of actually selecting colors that you're interested in converting to Crayola. There's an extensive array of options for swatch sizes. The swatch picker tool is extremely easy to use, and the software makes it possible to quickly access the right color. The Swatch color picker Once you've selected the swatch that you're interested in, the software will immediately begin converting that swatch's color. The only requirement for the color conversion process is that you have a Mac OS and a recent version of Photoshop installed. Once the color conversion [---
