Keyboard macros software, user friendly easy to use, easy to learn, convenient to use, not only good for use at home, can also be used in office, classroom. Keyboard Macros software Features: 1. Multiple macros editor 2. Attach multiple keyboard macros 3. Simple to configure and easy to use 4. Support hotkeys and mouse buttons (the mouse actions for each hotkey) 5. Interactive visual editor 6. Store macros in a database 7. Support hotkey and mouse actions Keyboard macros are recorded during the process of data entry and stored in the database. Users can edit and execute macros with ease. The recordings can be stored in a database that supports multiple macro files. The recorded data are played back with a sequence of hotkeys. The user can save the recorded macros to the database. The database also supports the loading and saving of macro files. With this keyboard macros software, users can save macros on different desktops. The top portion of the keyboard is divided into three parts: tools, hotkey, and macros. On the tools part, there are multiple macro editors. You can save a macro file on the top panel, load and save macros from the database, create new hotkey, edit the hotkey and define the hotkey bindings. A hotkey is a key combination or click on the mouse that represents a macro action. If users press Ctrl, S, or F10, the macro action becomes activated. For each hotkey combination, the corresponding macro is recorded. When a macro is activated, a button in the macro editor appears in the top portion of the keyboard. On the top portion of the macro editor, there are three buttons that represent hotkey bindings. The mouse action has a corresponding hotkey. The mouse buttons can be assigned to hotkeys. For example, the Enter button represents Ctrl+Enter. The Ctrl and Enter keys are used to save the macro file. The Shift button represents Shift+Enter. The Shift and Enter keys are used to create a new macro. When the mouse is used, the system records the actions of the left and right mouse buttons. When the left mouse button is pressed, the Ctrl key is pressed. When the right mouse button is pressed, the Shift key is pressed. In addition, the key combination is recorded. For example, Ctrl+Shift+Enter saves the macro file, Ctrl+Shift+S 70238732e0

How to delete a few text files using Windows Explorer published:21 Aug 2017 views:369 Learn How to Delete a few Text Files with Windows Explorer easily. Don't forget to Like, Share and Subscribe! More videos at: Download KeyboardVisualizerApp: Learn KeyboardVisualizerApp: Microsoft has released a major update to Windows 10 on August 1, 2017. It's the first major update to Windows 10 for quite some time. The update will be released gradually to Windows 10 users over the coming days. What's New? You can now easily delete files and folders by pressing the Del key. Simply click and hold on the files or folders that you want to delete. The shortcut will appear in the top left corner as you hover the mouse over the file or folder. Improvements to the Ribbon Microsoft has completely revamped the way the windows start menu functions. Now, if you press Windows Key + X the same way as before, it will open up the new search interface. The old search option is available as an option at the top of the new start menu. You can easily open the new search interface with Windows Key + S. Searching for files and folders is much faster and easier than before. Microsoft Edge has got a new feature that will make

users feel like they're browsing on a smartphone. If you open up the address bar and start typing, Microsoft Edge will suggest websites as you type. Saving Power If you have a laptop, you will be pleased to know that Microsoft Edge will work great while connected to a power adapter. Similarly, if you're working on a tablet, you can enjoy more battery life and faster performance. Default Apps To make sure that all files are always opened by the default app, you can right-click any file and select Open With under the Open With tab.
