And after a reboot everything was back to normal. That is, before the reboot - it was, and after the reboot - no. And, if you reboot from under Windows, then everything is fine. What does it mean? P.S. And if, nevertheless, the problem is that I installed Windows, in which there are some bugs? (Or are these bugs in XP? But, in any case, in tench, unfortunately, I do not know how to fix them.) then, I probably should have deleted all the information from the flash drive and installed tench from scratch.
