All versions except GOG.com require a one-time activation. Each serial key can activate M&B twice within 60 days. The game may require re-authentication ... In January 2010, information appeared that a patch would be released for the game, which would fix problems with saving synchronization with the game server, in particular, problems with displaying information about achievements, problems with display of player names, problems with displaying progress in battles, and lack of progress in the production and improvement of weapons. In addition, some bugs will also be fixed in the game, in particular, the incorrect operation of some items.
