As the method uses a pre-existing HTML document in the same webroot folder, it is also possible to use the online documentation and to configure features. The online documentation is very detailed, but is mainly aimed at people who want to install and operate the program. But there are also many manuals as well, which can be accessed from the main documentation website. The most important features include; print, PDF export, backup and restore, easy installation process of the entire database, easy bookmarking of the pages, color highlighting of the texts and of the code, search, regular updates of the manual and easy customization of all this using the internal settings. Exiting an open document. If one of the documents are open, the program allows you to save the current page and exit out of the page. This allows you to keep working while exiting the page and you can easily re-open the saved document at a later time. The saving of documents is very simple. You press the two buttons the file name and save it in the selected folder. The connection settings, mail settings and general settings are all accessible from the first page when you start the program. The connection settings allow you to change the servers that the program connects to and allows you to set up mail settings. An important feature is that you can set up the program so that the email notification is sent automatically. There are many settings available on this interface and you can set everything up to suit your personal settings. PDF export. You can export any of the documents into a PDF document. This allows you to quickly print out the document, archive it, password protect it or forward it onto others. There is also an option to add notes and comments to the document, when you want to explain special situations you have to go into the. This allows you to add additional comments and add links to other files. This is very useful if the document
