Captains 1 Description: If you work for a company that needs to use a "Hands Free" device (cell phone, lap top or headset) in order to perform certain tasks while driving, then HandsFree Driver may be the solution for

you. HandsFree Driver makes it possible to use your cell phone when driving and perform tasks such as making calls, texting, reading text messages, playing music, and controlling your media player while driving. HandsFree Driver is a completely new way to use your cell phone while driving. This innovative application makes calling safer because it prevents you from doing anything else while driving. HandsFree Driver identifies situations that you may need to use your cell phone while driving and takes control of your applications, data, and cellular data traffic, so that you can freely use your cell phone by focusing on the road and your driving while the application is controlling your

applications and traffic. HandsFree Driver is the only application that offers five extraordinary features.

1. HandsFree Mode HandsFree mode is designed to control your cell phone while driving. This mode gives you the option to choose different voice paths, picture paths, silent mode, or ringing mode and control the sounds as you desire. All of these options can be switched quickly, just like the individual lights on a vehicle. HandsFree Driver is designed for people who have smart phones or use a Walkman or a Tape player to listen to music.

2. Set Smarts HandsFree Driver will always know which activity is being performed. This way, you can pick your activities as you like

without having to manually enter things like your favorites, the music playing on your cell phone, or your favorite destination. 3. Set

Your Preferences You can customize the activities that you want the application to perform. This means that the application will automatically start your preferred audio player or phone, or come on your screen when you receive a call. 4. Focused Driving

The app features an audio voice play along with a visual prompt, which will provide you with all of the data and information you need, in a more streamlined and natural way. 5. Hands-Free Safety HandsFree Driver stops you from doing anything else while driving, whether it's texting,
