1 comments [...] Hex-Rays IDA Pro with Decompilers tutorial you will learn how to use Hex-Rays Decompilers plugin with. Hex-Rays IDA Pro is the best disassembler software for. Code decompilation is a process by which a set of instructions is. Q: Create a new object derived from an old one I just want to add a new method to an existing class (or maybe just convert the old class into a new one). Is there an easier, more straightforward way than create a new class with similar functionality? public class Foo { String name; int age; public Foo(String name, int age) { this.name = name; this.age = age; } public int getAge() { return age; } } A: You could try making a wrapper class, which just provides a way to call the methods, maybe this will make it easier for other developers to understand: public class FooWrapper { private final Foo foo; public FooWrapper(Foo foo) { this.foo = foo; } public int getAge() { return foo.getAge(); } } You could then make an instance of your new class: FooWrapper fooWrapper = new FooWrapper(new Foo("name", 23)); UPDATE Thanks for the clarification, this example might be clearer: public class Foo { String name; int age; public Foo(String name, int age) { this.name = name; this.age = age; } public int getAge() { return age; } } public class FooWrapper { private final Foo foo; public FooWrapper(Foo foo) {
