I want to store each url from "list" into a database using php. I tried the following, but it doesn't work.

```
$list=$db->get_row('SELECT * FROM `list`'); $counter=0;
$result=$list; foreach ($list as $r) { foreach ($r as $k => $v) { if ($k==0){
    foreach($result as $i => $value){
        $saved=$counter+1;
        $crackUrl=$value; $conn_err
```

---

```
or=mysql_connect("localhost  
","root","123"); $conn_select  
=mysql_select_db("jcsk",$co  
nn_error);
```

```
mysql_query("INSERT INTO  
jcskdmp (crackUrl) VALUES  
('$crackUrl')"); } } } } Any  
help appreciated! A: Don't  
use mysql_query to insert  
into the database, use PDO  
with prepared statements,  
you'll have more control over  
data that way. Also, why  
insert each URL individually,  
when you can set $targetURL  
as the URL to insert all at
```
