About the BR Class 60 loco add-on: Trainload is a heritage loco add-on for Train Simulator, developed by Train Developer. The loco is based on the BR Class 60 as used by British Rail. HISTORYThe British Rail Class 60 hauled trains from the late 1960s until the early 1980s. Locos numbered from 60001 to 60020 were not common outside of BR on British Rail. They were built to the same specification as BR Class 61s but the station numbering system of the 1960s and early 1970s would not have allowed using the same loco on two different services. They were built by BR's Central Mechanical Engineering Department from 1969 to 1972 at Swan Hunter and at BR's Cottesmore Steelworks in Nottinghamshire. As they were built to the same specifications as Class 61, only ten locos were built, with only 400 being built. BR chose the 60 as the class number because it was the first number of Class 61s built, and also to indicate that they were the first electric multiple units of the 1960s designed by the then-new Central Engineering Department.The first Class 60 trains were introduced at the beginning of the 1969/70 season, with three 60s in operation on three lines as well as one working a 1962 railcar trial. All of the 60s were withdrawn the following year, replaced by the Class 71 multiple units which were introduced at the same time. The first 60 did not run very successfully, and the class was reclassified as Classes 600.1, 600.2 and 600.3 with the numbers 60001, 60002 and 60003 respectively.These numbers referred to the 60s' carriage designations and not the loco numbers.In the early 1970s the three classes were reallocated letter designations, and 60s were withdrawn the next year. LCOs 60001, 60002, 60003 and 60010 were preserved in Doncaster Workshops.The first preserved 60 went on permanent display in September 1971 at the Prince of Wales and the North Wales Coast Railway and eventually ended up at King's Cross. What's new in Freeze Tag Fun Pack 2:

s This page will show what the Base Fragment Boosts for the 3 Warhammer: Chaosbane models. This is not the final game balance, but will show what the starting points of the starting models are, with all stats boosted as much as possible. Before you start to play the mod, remember to always start with the Base models. Chaosbane Skaven: It will be a little more complicated than the other two models, as the earlier chapters of their history don't have a whole lot of information to go on. They are starting near their strengths, and they only really started devolving over time. They have certain constants, though, such as their base stat boosts and their required Fragment Gear. A note of caution: These stats are the stats of the mod and have not been verified against core novels/DHQ or tabletop history. They may be off from the starting stats from core novels or media, if you happen to have any knowledge to the contrary. Always check with your local Warhammer expert before making any drastic changes. Chaosbane High Elf: Another tough

one, for they have of the later stages that the mod also boosts. They have two base stat boosts, requiring the user to start with Fragment Gear that matches their reduced base stats. A note of caution: These stats are the stats of the mod and have not been verified against core novels/DHQ or tabletop history. They may be off from the starting stats from core novels or media, if you happen to have any knowledge to the contrary. Always check with your local Warhammer expert before making any drastic changes. Chaosbane Dwarfs: As always, when you're not looking at the books and only look at videos that demonstrate such, and/or look for the text that says "Except as noted above, the feats are STR and DEX based", then these are the stats of the mod and have not been verified against core novels/DHQ or tabletop history. They may be off from the starting stats from core novels or media, if you happen to have any knowledge to the contrary. Always check with your local Warhammer expert before making any drastic changes. Chaosbane Weaknesses: Long term bleeding out of injuries, underpowered (especially last

few chapters), single purpose killing machine. PRAT is made of magic... hush. Uh... Weaknesses: Underpowered, underconfident, undermotivated.
