The new clip sees Levine travel to Melbourne to meet a deaf woman named Lily. The video, directed by Paul Hunter, also sees us see how Levine and Lily's respective day unfolds. Lily is deaf, has dyslexia and is learning sign language and has an understanding that puts her 10 years behind her peers. Throughout the video, Levine and Lily grow closer and the singer lets his guard down, showing us more of his vulnerable side. "You've got this disability and people look at you and they're like, 'Oh no, she's deaf. I'm not going to talk to her,'" Levine tells Lily in the video. "You're not going to take no for an answer." Fans and the singer's fans are loving the video and I'm sure it's going to get even more play for it being on the third season of The Voice. Adam Levine's Aussie Girl is out now. ## What's New in the AutoCAD?

Auto Draft: New ability to create topology-based constraints and constraints-based brushes in AutoCAD for industrial applications. This new feature gives you the ability to turn complex, repetitive, and/or manually-intensive tasks into repeatable, one-click actions. (video: 1:23 min.) Live Dashboard and Paintflow: Connect to cloud resources such as Dropbox or Google Drive from the Info tab in AutoCAD's main window. This allows you to view cloud files from the main AutoCAD window, rather than having to open an external application to access these files. Hybrid View: A new hybrid view. The new Hybrid view works like a blend of 2D and 3D views. Place an object in the Hybrid view to have a "view" of it from various angles. 3D-type annotations: Create 3D annotations with directional arrows, balloons, and other symbols. The new 3D Annotation tools give you the ability to create a type of 3D annotation without the need to be inside a 3D drawing. 3D project design: The new 3D Project Design feature helps you to quickly create and develop 3D designs. This new feature makes the modeling and documentation of 3D designs much more efficient. (video: 1:38 min.) 3D support for multi-level constraints: Edit multi-level constraints in AutoCAD with the ability to change one constraint without updating all the other constraints. 3D Warehouse: See detailed information about 3D model data, right in the 3D Warehouse. The new search functionality makes it easy to find out the details about a specific 3D model from the 3D Warehouse. 3D printing: Print with accuracy and precision. Render and print 3D models in the way they're meant to be viewed: from any direction at any angle. Create more professional designs with no limitations. 3D printing, also known as Additive Manufacturing (AM), is a technology used to make objects by combining solid layers of material, often from digital models. (video: 3:10 min.) Fusion 360 integration: Rapidly and accurately integrate 3D models into your designs. From the model browser in AutoCAD, you can make simple changes to your 3D models and preview how they would appear in 2D and 3D.
